

What Umbra Can Do

Your invisible assistant for Windows.

You talk. It works on a computer for you.

Talk or type

It does the work

You approve

Simple guide - no tech talk. - Plans, Cloud and Routing explained plainly.

1. What you can do with Umbra

All from one app on your PC.

- **Talk to your Agent:** Chat or speak. Ask it to search, write, summarize, code, translate, remind you. It answers and can act.
- **Let it work on a computer:** Say 'book this', 'fill this', 'check that'. It opens browser/apps and does the steps. You watch and approve.
- **Every agent has its own PC:** Each helper gets its own computer space. They don't mix files or logins. See section 3.
- **Connectors (your apps):** Link Gmail, Calendar, Drive, Slack, Discord, Notion, GitHub, Stripe and more. Then Umbra can send, read and update for you.
- **Smart Home:** Lights, plugs, thermostat, locks, sensors, cameras. Control by name. Set simple routines like 'every day at 8pm turn off'.
- **Meetings:** Umbra can join Meet, Zoom or Teams, write live notes, list actions and decisions, mute, raise hand, share screen, speak for you.
- **Memory:** It remembers facts, people, projects and past chats in your Brain graph and journal. Ask 'what did I work on?'
- **Vault:** Passwords, cards, Wi-Fi, notes. Locked on your machine. Copy with one click.
- **Phone (calls + SMS):** Real phone number. Call log, dial, send SMS from the app.
- **Devices:** Pair your phone or second PC with a QR code. See battery, send files, control from phone.
- **Usage:** See calls, tokens and cost. Upgrade plan. No surprises.

2. Where does the work run?

Three choices. You pick, or leave it on Auto.

My PC

Umbra works right on your Windows, in your browser and apps. Best for things that need your logins and screen.

Connected device

Use your other PC or phone as the worker. Good when your main PC is busy. Device must be online.

Cloud PC

A computer in the cloud that works even when your PC is off. Good for long jobs. Comes with paid plans.

Auto means: Umbra picks the free, fast place that can do the job. You can also force one place per task.

3. Every agent has its own PC

Important: looks like many PCs, smartly shared inside.

Think of it like hotel rooms. From outside every guest has their own room with their own key, bed and desk. Inside, it is one safe building.

Umbra does the same: each agent gets its own space - own files, own browser profile, own task list, own screen view. They cannot see each other. For you it feels like 'one PC per agent'. Under the hood Umbra separates them inside one safe container (on your machine or in the cloud), so it is fast and cheap, but still private.

- **Separate:** files, logins, browser tabs and history per agent.
- **Safe:** one agent cannot break another.
- **Simple:** you just see Agent 1 PC, Agent 2 PC, and so on.

4. Cloud (Hetzner) in plain words

No servers talk. Just this:

When you pay for a plan, Umbra can create a cloud computer for you. It installs everything, you get a link. When the job is done or you cancel, it deletes it. You only get cloud while you pay. Small plan = small cloud. Big plan = big cloud.

- **Pro:** small cloud computer for daily jobs.
- **Ultimate:** medium cloud computer for heavier, longer jobs.
- **Enterprise:** large cloud computer for teams and non-stop work.

5. Routing in plain words

Two auto-choices Umbra makes for you.

1) Where to run: My PC, connected device, or cloud. Auto picks the one that is online and fits the job. Screen work stays on a real PC. Quiet computer work can go to the cloud.

2) Which AI to use: fast cheap model for easy things, strong model for hard things. This saves money and time. You don't need to choose - paid plans unlock smarter routing, caching and higher limits.

Example

Ask 'summarize this page' -> runs on your PC with fast model. Ask 'build this app and test it for 2 hours' -> runs on cloud PC with strong model.

6. Plans

Same names as in the app. Pick by how many PCs you need.

	Pro \$20/mo	Ultimate \$38/mo	Enterprise \$89.99/mo
Agent PCs	1	5	Unlimited
Devices	1	5	Unlimited

Cloud PC	Small	Medium	Large
AI power	Normal	Strong	Strongest
Calls / SMS	-	-	Included
Best for	Daily use	Power use	Teams

In the app Ultimate is shown as 'Advanced'. Same thing. Free and BYOK (bring your own key) are for trying.

How to pick: 1 agent and 1 device is enough? Take Pro \$20. Need up to 5 agents and 5 devices? Take Ultimate \$38. Need unlimited, biggest cloud and calls? Take Enterprise \$89.99.

You can start free, then Checkout with Stripe in Usage. Cancel deletes the cloud computer.

7. Safety

You stay in control.

- **Ask first:** Umbra asks before it clicks or types for you.
- **Emergency stop:** One button stops everything at once.
- **Private first:** Secrets stay in your Vault on your machine. Screen reading is filtered before saving.

8. Start in 3 steps

1. Open Umbra, log in.
2. Go to Connectors, connect Gmail / Calendar / one app you use.
3. Go to Agent and say: 'plan my day from my calendar and summarize my unread mail'.

Then try Smart Home, Meetings and Phone when you need them.
